

CSCE 312 Computer Organization Individual Report

10/28/2015

Name: Gustavo Estrela de Matos

Group: Cameron Amos, Vincent Tran and me

My role and what I did: Designed and implemented exercise 3

Parts designed with other group members: Nothing completely, but we did discuss how to implement the first two problems all together briefly, then I started working on problem 3 and left Vincent and Cameron working on problem 1 and 2.

List of the advantages that you perceived in this team based design assignment: We were able to split tasks in a way that no one had to work more.

List of the disadvantages of team based design assignment: Since the project was in a week near exams and other projects deadlines, and also, my schedule of exchange student is very different from Cameron and Vincent, I couldn't work together with them much.

According to you, which your group member's design was superior: I believe that Vincent came up with good ideas when we were trying to understand problem 2.
